

Building Speaking Skills (15 Minutes)

Teacher: Ahsan Hussain Khan

Student: Ahmet

Focus: Enhancing general life fluency and charisma in storytelling, with Business English integration for professional and casual settings. This exercise teaches a key technique, applies it through problem-solving, and ends with video practice.

Step 1 (5 Minutes) - Learn the Technique

Read and understand the “Story Arc” method for charismatic storytelling. This is a simple structure to make your stories engaging:

1. **Hook:** Grab attention with a surprising or vivid opener.
2. **Build-up:** Describe challenges and actions using Business English like “We faced significant obstacles in the geotechnical analysis.”
3. **Climax:** Highlight the turning point or innovative solution.
4. **Resolution:** End with a positive outcome and lesson, e.g., “This led to a 20% efficiency gain through team collaboration.”

Review this arc with an example:

Hook: Imagine a highway crumbling under unexpected rain.

Build-up: Our team identified pavement distress due to poor subgrade.

Climax: We applied geosynthetics for stabilization.

Resolution: The project finished ahead of schedule, saving costs.

5 Good Hook Sentences

These are engaging openers to grab attention, using vivid or surprising elements from engineering scenarios.

- Imagine a bustling highway suddenly cracking like fragile glass under heavy traffic—what a nightmare!
- Picture this: a massive bridge project halted by hidden underground secrets that no one saw coming.
- You won’t believe how a simple rainstorm turned a smooth pavement into a treacherous obstacle course overnight.
- What if one overlooked soil layer could derail an entire multimillion-dollar infrastructure plan?
- Envision standing on a site where the ground beneath your feet is plotting against your every design.

5 Build-Up Sentences

These describe the challenges and actions, incorporating Business English like “obstacles,” “strategic analysis,” or “collaborative efforts.”

- Our team encountered significant geotechnical obstacles, prompting a thorough soil analysis to assess the subgrade stability.
- As delays mounted due to pavement distress, we initiated collaborative efforts with experts to evaluate alternative materials.
- Facing budget constraints and timeline pressures, we conducted detailed highway simulations to identify key risk factors.
- The project hit a snag with unstable terrain, leading to strategic pivots in our engineering approach and resource allocation.
- Amid rising challenges from environmental factors, our group performed in-depth testing to ensure load-bearing capacity.

5 Climax Sentences

These highlight the turning point or innovative solution, building excitement with words like “breakthrough” or “decisive action.”

- That’s when our breakthrough with advanced geosynthetics transformed the unstable soil into a solid foundation.
- In a decisive moment, we implemented an innovative asphalt mix design that resolved the pavement cracking issues instantly.
- The game-changer came with our adoption of cutting-edge stabilization techniques, turning potential failure into triumph.
- Suddenly, integrating smart sensors for real-time monitoring provided the critical data to overhaul the highway layout.
- Our pivotal innovation—using recycled materials for reinforcement—shifted the entire project from crisis to control.

5 Resolution Sentences

These wrap up positively, emphasizing outcomes and lessons with Business English like “optimal results,” “efficiency gains,” or “successful collaboration.”

- In the end, the project delivered optimal results, completing ahead of schedule and achieving a 25% cost savings through efficient teamwork.
- This led to successful outcomes, with the pavement enduring heavy loads and setting a new standard for sustainable engineering.
- Ultimately, our collaborative strategies yielded efficiency gains, enhancing the highway’s durability and client satisfaction.

- The resolution brought positive lessons in risk management, resulting in a robust infrastructure that exceeded all performance metrics.
- Wrapping up triumphantly, the initiative not only met deadlines but also fostered long-term partnerships for future ventures.

Step 2 (5 Minutes) - Solve and Apply

Choose a recent engineering story from your career (e.g., a highway project challenge). “Solve” it by mapping it to the Story Arc: Write down 1–2 sentences for each part (Hook, Build-up, Climax, Resolution), incorporating Business English vocabulary like “strategic pivot,” “collaborative effort,” or “optimal results.” This helps organize your thoughts for fluent, charismatic delivery.

Step 3 (5 Minutes) - Record and Send Video

Tell your full story aloud using the arc, aiming for charisma (expressive tone, varied pace, positive energy). Record a 1–2 minute video of yourself sharing it as if to a colleague. Playback quickly to self-assess fluency and engagement, then send the video to me for feedback.
