1 Step 1: Learn the Story Arc Technique (5 Minutes)

OKAY buddy so there are 4 steps in a story ARC. The **Story Arc** method makes stories engaging:

- **Hook:** Start with a surprising or clear opener to grab attention.
- **Build-up:** Describe the problem and actions using simple Business English (e.g., “We had a big problem with the machine’s performance”).
- **Climax:** Share the key solution or exciting moment.
- **Resolution:** End with a positive result and a lesson (e.g., “This saved time and improved our work”).

1.1 Example Story

- **Hook:** Imagine a factory machine stopping suddenly, halting all production!
- **Build-up:** Our team found a fault in the gear system after careful checks.
- **Climax:** We designed a new part to fix the issue quickly.
- **Resolution:** The machine worked better than ever, saving 15% on repair costs.

1.2 Story Arc Sentence Examples

1. Hook Sentences

- Picture a huge factory machine breaking down right before a big deadline!
- What if one tiny part could stop an entire production line?
- Imagine a robot arm failing during a critical test—total chaos!
- Ever seen a machine overheat and threaten a whole project?
- Think about a new design that almost failed because of one small mistake.

2. Build-up Sentences

- We faced a big issue with the motor, so we ran tests to find the problem.
- The machine kept jamming, and our team worked together to check every part.
- Time was short, so we studied the design to find a quick fix.
- The system failed under heavy load, leading to a full team effort to solve it.
- A faulty component caused delays, so we analyzed data to improve it.

3. Climax Sentences

- Then we found a new way to adjust the gears, fixing the machine fast!
- Our quick redesign of the cooling system saved the whole project.
- Suddenly, a simple software update made the robot work perfectly.
- We built a stronger part in just one day, turning things around!
- The new tool we created solved the problem instantly.

4. Resolution Sentences

- In the end, we fixed the machine and saved 20% on costs with teamwork.
- The project finished on time, and we learned how to avoid future issues.
- Our solution made the system stronger and kept the client happy.
- We completed the task early, improving our skills in problem-solving.
- The fix worked well, and we built better teamwork for future projects.

2 Step 2: Solve and Apply (5 Minutes)

Choose a recent mechanical engineering story (e.g., fixing a machine or improving a design). Map it to the Story Arc by writing 1–2 sentences for each part (Hook, Build-up, Climax, Resolution). Use simple Business English like “big issue,” “team effort,” or “great result.” This organizes your story for clear and confident delivery.

2.1 Example

- **Hook:** A key machine stopped working right before a major delivery!
- **Build-up:** We checked the system and found a worn-out part causing trouble.
- **Climax:** Our team created a new part design in just two hours.
- **Resolution:** The machine ran smoothly, and we delivered on time, learning the value of fast teamwork.

3 Step 3: Record and Send Video (5 Minutes)

Tell your story aloud using the Story Arc. Aim for charisma with a clear voice, changing speed for excitement, and positive energy. Record a 1–2 minute video as if sharing with a coworker. Watch it to check your fluency and energy, then send it to your instructor, Ahsan, for feedback.
